

Assignment 1 Completion Report

Student Name: Ahmad Ali Khan (FA24-BCS-142)

Degree / Semester: Bachelor of Science in Computer Science

University: COMSATS University Islamabad, Lahore Campus

Course: Web Technologies (Lab Task 1)

Submission Date: 2 October 2026

Assignment Statement

Assignment 1 — Your Personal CV Page

Difficulty: Foundational · **Covers:** Lectures 3–6 (HTML & HTML5, Semantic HTML and Forms, CSS Fundamentals, the CSS Box Model) · **Folder:** assignment-1/

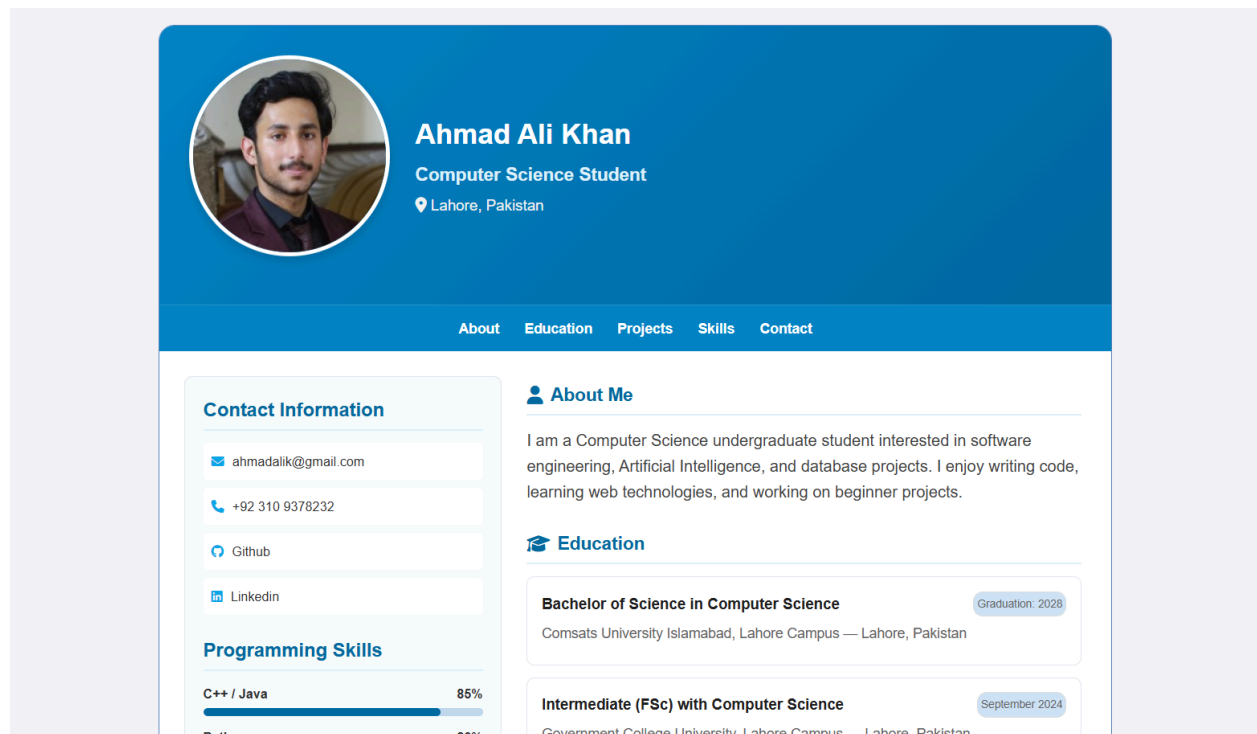

Task: Build a single-page personal CV/résumé as a static HTML + CSS website — no JavaScript, no framework, just semantic HTML5 and hand-written CSS. This is where you prove you actually know the raw building blocks before anything is allowed to hide them from you.

Your page must include, at minimum:

- A header with your name, a short professional tagline, and a photo (a placeholder image is fine).
- An “About Me” section.
- An “Education” section listing your academic history in a semantic list or table.
- A “Skills” section.
- A “Contact” section with a real `<a href="mailto:...">` link and at least one social/portfolio link.
- Correct use of semantic HTML5 elements throughout — `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, `<footer>` as appropriate, not a page built entirely out of unstyled `<div>`s.
- Styling entirely in a separate `styles.css` file (external stylesheet, not inline `style=""` attributes) using the box model correctly — sensible margins, padding, and borders, not everything jammed against everything else.

Deliverables in assignment-1/: index.html, styles.css, any images, and your completion PDF.

Interests

Software Development AI Photography

Travelling

AI-Based Fitness Recommendation Expert System

Artificial Intelligence

- Developed a web-based fitness recommendation system using Python and Streamlit.
- Implemented a rule-based expert system with a knowledge base and forward chaining.
- Generated personalized workout plans, exercise recommendations, and BMI analysis.

Delivery Management Simulator

DSA

- Developed a Java-based delivery management simulator with user and admin modules.
- Implemented Dijkstra's Algorithm and utilized Linked Lists, Queues, Stacks, Heaps, and HashMaps.

Android Media Player

OOP

- Developed an Android media player using Java and Android Studio.
- Implemented playback controls, playlist management, search, and automatic audio scanning.

Kitchen Accessories Database Management System

Database Systems

- Designed a normalized relational database in SQL Server with 12 interconnected tables.
- Implemented relationships and SQL queries for efficient data management.

Bakery Management System

Programming Fundamentals

- Developed a console-based bakery management system in C++.
- Implemented inventory management, billing, order history, customer feedback, and file storage.
